DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, claims 1 - 5 in the reply filed on March 29,

2007 is acknowledged. The traversal is on the ground(s) that the inventions are not distinct and

independent, that the search is overlapping and that there is a special technical feature of using

calcium chloride as the coagulant. This is not found persuasive because the inventions are

clearly distinct in that one group is drawn to a method for making a fibrin membrane and the

other is for the membrane itself. Furthermore, while the searches may overlap, an overlapping

search is not a coextensive search. Moreover, a reference that would anticipate one group, may

not anticipate or even make obvious the invention of the other group. Finally, regarding

applicant's identified special technical feature, it is noted that in order for the groups to contain a

special technical feature, it must be a technical feature that contributes over the prior art. As

evidenced by the references and rejections below, calcium chloride was a known and used

coagulant in the art at the time the invention was made.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1 - 12 are pending; claims 6 - 12 are withdrawn as being drawn to non-elected

subject matter; claims 1-5 have been considered on the merits.

Art Unit: 1651

Claim Objections

2. Claim 5 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim (i.e. claim 3). See MPEP § 608.01(n).

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 and its dependents are drawn to a process for making a fibrin membrane, however are rendered vague and indefinite because the while the method preamble refers to making a membrane, the final step is drawn to a clot. It is unclear if applicants intend to make a membrane or a clot, as there do not appear to be any positive steps recited to manufacture the membrane.

In claim 2, line 1, "said physiological clotting agent" lacks sufficient antecedent basis.

In claim 3, line 2, the recitation of "physiological" does not grammatically match the recitation of "physiologic" in claim 1. To comply with proper antecedence, applicant may prefer to amend one of the terms so that they are the same.

Art Unit: 1651

Claim 5 is confusing because the term "low boiling alcohols" has not been clearly defined by the claimed language or specification.

Claim 5 is further indefinite for reciting "in particular", because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beretta (WO 98/58689) and Stroetmann (US 4427651).

Applicant claims a method for making a fibrin membrane, the method comprising adding a coagulant to blood plasma to gel and form a clot; removing transudates with an absorbent; washing the clot with dehydrating and softening agents; drying and sterilizing the clot. The coagulant is calcium chloride; the absorbents are inorganic salts, specifically NaCl, NaHCO3 or mixtures thereof; and the softening agents are ethanol and propanetriol (glycerol).

Beretta teaches a method for making a fibrin clot/membrane, wherein plasma is contacted with calcium chloride (p.2, examples).

Stroetmann teaches methods for making fibrin clots/membranes wherein plasma is coagulated with an agent followed by washing with NaCL (col.9 line 36-45).

Art Unit: 1651

At the time of the claimed invention, it would have been obvious to one of ordinary skill in the art to practice the instant steps as they were well known and practiced in methods for making fibrin clots and membranes. Although the references do not teach the claimed steps of dehydrating, drying and/or sterilizing with the instant softening agents, it was well known to do so in the art at the time the claimed invention was made. Moreover, at the time of the claimed invention, one of ordinary skill in the art would have been motivated by routine practice, as evidenced by the cited references, to practice the instant steps with a reasonable expectation for successfully making a fibrin clot/membrane.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ruth A. Davis whose telephone number is 571-272-0915. The examiner can normally be reached on M-F 7:00 -3:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
